

AMENDMENTS TO THE CLAIMS

1-20. (Cancelled).

21. (Previously presented) A machine-implemented method of managing content at a web site, the method comprising:

receiving a first request from a user to create a particular content item in a particular folder associated with the web site;

in response to the first request, inspecting permission data to determine that said user has create-with-approval privileges relative to said particular folder;

in response to determining that said user has create-with-approval privileges relative to said particular folder, adding said particular content item to said particular folder in a not-publicly-visible state;

in response to receiving input that grants approval for the particular item to be created in the particular folder, changing the state of the particular content item to a publicly-visible state;

receiving a second request;

in response to the second request, determining a current state of the particular content item;

if the current state of the particular content item is the publicly-visible state, then responding to the second request by providing a web page that includes said particular content item; and

if the current state of the particular content item is in the not-publicly-visible state, then responding to the second request by providing a web page that does not include said particular content item.

22. (Previously presented) The method of Claim 21, wherein receiving the first request comprises:

receiving the first request to create the particular content item in the particular folder

by storing the particular content item in a database in a location that identifies the particular content item resides in the particular folder.

23. (Previously presented) The method of Claim 21, further comprising:
after the particular content item has been added to said particular folder in a not-publicly-visible state, updating mapping data that indicates a folder-to-content item mapping.
24. (Previously presented) The method of Claim 21, wherein the create-with-approval privilege was granted to the user by a folder owner of the particular folder.
25. (Previously presented) The method of Claim 21, further comprising:
in response to receiving input from a folder owner, associating a style attribute with the particular folder, wherein the style attribute describes how to display content items that belong to the particular folder; and
displaying the particular content item in accordance with the style attribute.
26. (Previously presented) The method of Claim 21, further comprising:
in response to determining that said user is a folder owner or has manage-item-privileges relative to said particular folder, adding said particular content item to said particular folder in a publicly-visible state.
27. (Currently Amended) A machine-readable storage medium carrying one or more sequences of instructions for managing content at a web site, wherein execution of the one or more sequences of instructions by one or more processors causes:
receiving a first request from a user to create a particular content item in a particular folder associated with the web site;

in response to the first request, inspecting permission data to determine that said user
has create-with-approval privileges relative to said particular folder;
in response to determining that said user has create-with-approval privileges relative
to said particular folder, adding said particular content item to said particular
folder in a not-publicly-visible state;
in response to receiving input that grants approval for the particular item to be created
in the particular folder, changing the state of the particular content item to a
publicly-visible state;
receiving a second request;
in response to the second request, determining a current state of the particular content
item;
if the current state of the particular content item is the publicly-visible state, then
responding to the second request by providing a web page that includes said
particular content item; and
if the current state of the particular content item is in the not-publicly-visible
state, then responding to the second request by providing a web page
that does not include said particular content item.

28. (Currently Amended) The machine-readable storage medium of Claim 27, wherein
receiving the first request comprises:
receiving the first request to create the particular content item in the particular folder
by storing the particular content item in a database in a location that identifies
the particular content item resides in the particular folder.

29. (Currently Amended) The machine-readable storage medium of Claim 27, wherein execution of the one or more sequences of instructions by the one or more processors further causes:
after the particular content item has been added to said particular folder in a not-publicly-visible state, updating mapping data that indicates a folder-to-content item mapping.
30. (Currently Amended) The machine-readable storage medium of Claim 27, wherein the create-with-approval privilege was granted to the user by a folder owner of the particular folder.
31. (Currently Amended) The machine-readable storage medium of Claim 27, wherein execution of the one or more sequences of instructions by the one or more processors further causes:
in response to receiving input from a folder owner, associating a style attribute with the particular folder, wherein the style attribute describes how to display content items that belong to the particular folder; and
displaying the particular content item in accordance with the style attribute.
32. (Currently Amended) The machine-readable storage medium of Claim 27, wherein execution of the one or more sequences of instructions by the one or more processors further causes:
in response to determining that said user is a folder owner or has manage-item-privileges relative to said particular folder, adding said particular content item to said particular folder in a publicly-visible state.
